

BreatheBetter

Spira. Scio. Vive. — Breathe. Know. Live.

Platform Policies

Privacy, terms, disclaimers and consent for the BreatheBetter platform

Effective date: 18 June 2026 · DPS International

Prepared by Ryan Tyagi — MYP Personal Project

The following policies govern your use of BreatheBetter. They are written in plain language for a student awareness project and do not constitute legal or medical advice.

1. Privacy Policy

This Privacy Policy explains what information BreatheBetter collects, why, and how it is handled. BreatheBetter is a student awareness project and is not a commercial medical service.

Information we collect

- **Account information:** the email address you use to sign in.
- **Measurement data:** your FEV1, FVC and FEV1/FVC results, the raw timestamped sensor readings from each test, the calibration factor, and the time of each test.
- **Local preferences:** theme (light/dark), language and calibration settings stored in your browser.

How we use it

Your data is used only to display your results, build your personal history and flow-volume curves, and let you track changes over time. We do not sell your data, show advertising, or share your information with third parties for marketing.

Storage and security

Account and measurement data are stored in a secured cloud database protected by access rules so that each user can read and write only their own records. Sign-in is handled by an established authentication provider; we never see or store your raw password.

Your rights

- Access and export your complete result history at any time.
- Delete individual results or request removal of your data.
- Withdraw consent by discontinuing use and deleting your records.

Children and students

This project is operated in a school context. Students should use it with the awareness of a parent, guardian or teacher where required by their school.

2. Terms of Service

By creating an account or using BreatheBetter, you agree to these Terms. If you do not agree, please do not use the platform.

Purpose and eligibility

BreatheBetter is provided for educational and awareness purposes only. It is intended for use by students and individuals in a supervised, non-clinical setting.

Acceptable use

- Use the platform honestly and only for its intended awareness purpose.
- Do not attempt to misuse, attack, reverse-engineer for harm, or disrupt the service.
- Do not rely on the platform for diagnosis, treatment, or emergency decisions.

No warranty

The platform is provided "as is", without warranty of any kind. Measurements are approximate and depend on hardware, calibration and technique. Accuracy is not guaranteed.

Limitation of liability

To the maximum extent permitted by law, the author is not liable for any decision made, or harm arising, from use of or reliance on the platform. Always consult a qualified professional for medical concerns.

Changes

These Terms may be updated as the project evolves. Continued use after changes constitutes acceptance of the revised Terms.

3. Medical Disclaimer

BreatheBetter is not a medical device and does not provide medical advice, diagnosis or treatment. It is an educational awareness tool only.

- Results are estimates produced by low-cost hardware and may differ significantly from clinical spirometry performed by a healthcare professional.
- A "Normal" result does not rule out illness; a "Low" or "Borderline" result does not confirm any condition.
- Never start, stop or change any treatment based on a BreatheBetter result.
- Always seek the advice of a physician or qualified health provider with any questions about a medical condition.

Reliance on any information provided by BreatheBetter is solely at your own risk.

4. Cookie Policy

BreatheBetter does not use advertising or third-party tracking cookies.

What we store on your device

- **Essential local storage:** your sign-in session, selected theme, chosen language and calibration factor are saved in your browser's local storage so the app remembers your preferences.
- **No tracking:** we do not profile you, follow you across other sites, or share browsing data.

Managing local data

You can clear this information at any time by signing out or clearing your browser's site data. Doing so will reset your preferences but will not delete results already saved to your account.

5. Health Data Consent Notice

Breathing measurements are health-related information and are treated with particular care. By running a test and saving the result, you provide explicit, informed consent to the following.

- You consent to the collection of your breathing measurements (FEV1, FVC, ratio and raw readings) and their storage in your personal account.
- You understand the data is used only to show your own results and history.
- You understand participation is voluntary and you may withdraw at any time by deleting your data.
- You understand this data is collected for awareness, not for clinical diagnosis.

Consent is specific to this purpose. We will seek fresh consent before using your health data for any new or different purpose.

6. Emergency Notice

BreatheBetter must never be used in a medical emergency. It is not monitored, is not a diagnostic device, and cannot summon help.

If you are experiencing a medical emergency

If you or someone near you has severe difficulty breathing, chest pain, bluish lips or face, confusion, fainting, or any other sign of a serious medical emergency, stop using this app and contact emergency services immediately.

- **India — all emergencies:** 112
- **India — ambulance:** 102 or 108
- **Your local emergency number** if you are outside India.
- Contact a doctor, hospital, or a trusted adult without delay.

Do not wait for or rely on any reading from this platform before seeking help in an emergency.
